ends; females are larger at the base; those which swell out in the middle are a-thet ma-shi—without life; taing bilu, ogre's posts are largest at the top. As a general rule it may be taken for granted that if a house is built with neuter posts, its inmates will always be miserable and unlucky; if the posts are ogres, death and disaster will attend; male posts are easy-going and harmless; females, on the contrary, are fortunate and leading to honour. But it may happen that the character of the piece of ground on which the house is built upsets all these generalisations, so that it is necessary to get a wise man's opinion before you get your posts. The Deittôn gives many instructions on the subject, and among other things mentions how a man's fortune may be calculated from the Hle-ga-tit, the side pieces of the steps which lead up to the verandah. The presence or absence of knots, and if the former, their position, determines the luck of the householder.

Poor people use bamboo instead of wood, and make their walls of mats, woven of the same substance, split up. Occasionally, however, they rise to the dignity of common jungle timber. Richer people make use of the invaluable teak, or of pyinkado (*Xylia dolabriformis*), a wood almost as durable, and equally expensive. White ants will attack neither of these. The walls of such houses are planked. The roof is sometimes composed of small flat tiles, but more commonly of thatch. This consists in most places in the Delta of dani, the leaves of the toddy palm, which are first soaked in salt water, a precaution which prevents insects from destroying them. Up country a species of grass called thekkè is universally used. This style of roofing is very satisfactory in every respect but one. It is cheap, easily put on, reasonably water-tight, but very inflammable, and consequently is not allowed in any of the larger towns in the Province. In the smaller stations, however, it is almost universal, and the consequence is that when one house takes fire, the sparks from it kindle all the others, as a matter of course. Consequently, as an imperative measure of protection, every house is provided with a long hooked bamboo, called a mi-cheit, by means of which to pull off all the thatch as soon as a fire breaks out in the neighbourhood, and in

342 addition to this a mi-kat stands beside it. This is a broad
731 griddle, or flapper kind of thing, and its object is to beat out
● 355 the flame which may be caused by a spark lighting on the roof. In addition to this, in many parts of the country, pots full of water are always kept in readiness on the tops of the houses, so that when the hour of danger comes, the householder may douse his roof, and so do the best for him-
[368] self. In Mandalay, under native rule, some of the pa-gwets, and other outcasts, patrolled the streets all night, to watch for and prevent fires as much as possible.

342 Another kind of roofing is wā-kat, a sort of flat tile-like construction, six feet long by two feet broad, made of coarse bamboo matting. Bamboos split in half down the centre, and with the knots smoothed away, are also used. They are placed close together, with the hollow side upwards, extending all the way down from the ridge to the eaves, and over these again are placed others with the rounded side up, the whole presenting rather a curious appearance, but making a very serviceable roof and not nearly so dangerous as the leaf or grass thatching. The leaves of other trees are also occasionally used, but the simplicity and cheapness of the dani roof make it by far the most prevalent in the delta, as grass is elsewhere, notwithstanding its danger. In Rangoon and Maulmein, shingles, that is, small wooden slabs like slates, are being very generally introduced.

In the better class of houses the floors are made of
[565] planking, but poorer people have nothing better than a series of whole or split bamboos laid side by side on the cross-beams and tied down with rattans. This is not very pleasant to walk on, and has the further disadvantage of being anything but cleanly, for the spaces between the bamboos offer an irresistible temptation to drop all litter and garbage on to the ground immediately underneath the house, and were it not for the pariah dogs the sanitary condition of the place would soon be very bad.

352 The house is thus simple enough in its character, but
177-35 the furniture is still more so. Intercourse with the English
349 has indeed brought many Burmans to indulge in English luxuries, and in many houses in Rangoon and the larger district towns, chandeliers, bookcases, pictures, and even

342 like to the bamboo sticks and together with them
824 bound to the roof rafters (Figure 2). The larger leaves of the Ingyin (Shorea robusta) (8) are

Wehrli, Zur Wirtschafts- und Siedlungs-Geographie von Ober-Birma /Economic and Settlements Geography of Upper Burma/ (Zurich, 1906), p. 111; Ferrars, ibid., p. 227.

sometimes seen as roofing material, pinned together in rows /207/ with bamboo pins and squeezed with poles against the roof (Figure 3).
342 The grass roofs, particularly during the windy,
[656] dry winter season, are, of course, an extreme fire hazard and are therefore now prohibited for the cities. There--wherever brick or corrugated tin roofs have not been adopted--a roofing material, called "wakat," a shingle, cut from braided bamboo work is used. As a poor protec-
● 355 tion in case of fire, which frequently burns down whole villages, a wooden hook, attached to a long handle is employed to tear off those parts of the grass roof which have caught fire and a damper, made of bamboo braided material is used to extinguish the sparks. These two utensils can be seen in practically every house (cf. Plate IV, 1 and especially Plate IV, 3); sometimes a number of jugs, filled with water, are seen standing at the ridge of the roof for purposes of fire fighting.

342 The Burmese attributes good and bad luck in
777 all his undertakings to the influence of the in-
787 numerable benign and evil spirits (Nat) who were originally outside the Buddhist creed, and he makes his decisions dependent on omens and oracles
